

Timberline

Guild's feature-laden SEQUOIA powers four 8 inch speakers and a high performance bullet tweeter via two 80 watt constant current amplifiers. Input matching preamp for active or passive instruments. Separately tone controlled guitar and mic inputs with XLR or 1/4" jacks; 5-band graphic equalizer. Spring reverb, isolated effects loop, footswitch controllable Stereo Chorus and Rototron. Fully interlocked, solid oak cabinet with ARC system. Gold footswitch and gold on brown Guild emblazoned cover included.

After painstaking research of what top guitar players are looking for, Guild is proud to present its new TIMBERLINE. Handsomely crafted in rugged solid oak cabinetry, the Guild TIMBERLINE is all you need to bring out the richest sounds of natural wood.

All Guild acoustic amplifiers feature the advanced ARC (™) baffle design. The ARC, or "Acoustic Recessed Cabinet", couples slant-back speaker baffles with tuned sidewall venting to provide true acoustic realism. This realism is often lost when normal amplification is used. Surprisingly loud output is now available in a compact, portable package.

The electronics in these stereo high-fidelity amps offer the last word for creating yesterday's and today's hottest sounds. All models offer a stereo chorus and high quality spring reverb. Equipped with an anti-feedback notch filter, you can dial out unwanted frequencies. You can customize the pick / attack frequencies with Guild's Plectron control. The Plectron will add brilliance to your finger-pick'n' or go soft for more subtle chord strumming. The signal level of passive or active guitars is easily matched with the Active / Passive switch.

Passive instruments are further controllable by the Sensitivity adjustment.

The Aspen and Sequoia models feature Guild's new variable speed Rototron (™) circuit which can add new dimensions to your performance. At some settings it delivers a rotating speaker effect but it can also provide a thicker sound that some musicians liken to playing more strings at once. Well thought out and attractively executed, Guild's dependable TIMBERLINE finally delivers the sounds that you've been looking for all along.

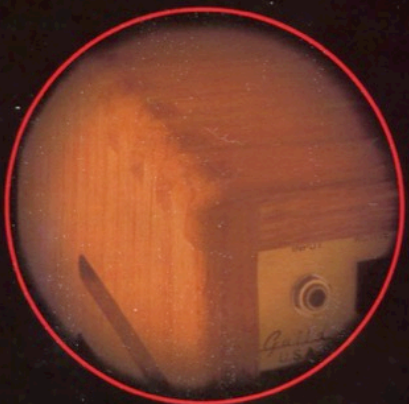

CHORUS ROTOTRON

G300 TAMARACK

Stereo, 20 watt per channel amplifiers power two 8 inch speakers and tweeter. Input matching

preamp for active or passive instruments. Spring reverb, panel control Stereo Chorus, headphone jack. Fully interlocked, solid oak cabinet with

SOLID OAK CABINETRY

ARC system. Gold on brown Guild emblazoned cover included.

G600 ASPEN
G600 D (Digital Reverb)

Stereo, 30 watt per channel amplifiers power two 10 inch speakers and tweeter. Input matching preamp for active or passive instruments. Spring reverb, isolated effects loop, footswitch controllable Stereo Chorus and Rototron, headphone jack. Fully interlocked, solid oak cabinet with

ARC system. Gold footswitch and gold on brown Guild emblazoned cover included.

**The quality sound
you expect from Guild**

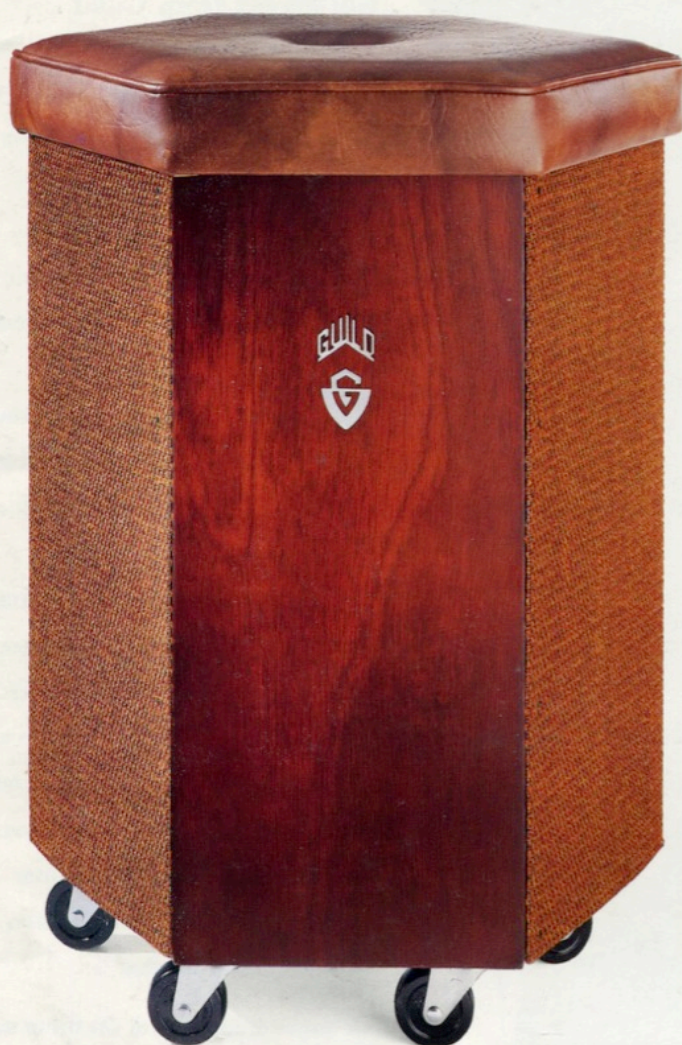

Designed specifically for acoustic guitars, the new G-1000 tri-powered and G-500 bi-powered amplifiers from Guild accurately reproduce that unique, natural acoustic sound—without alteration. That's why our dealers named the G-1000 "product of the year."

In addition to outstanding natural sound quality, the G-1000 doubles as a performance seat—ideal for the home or stage environments.

Both amplifiers include electronics specifically engineered for acoustic use: individual speakers covering the entire acoustic guitar sound spectrum; a comprehensive set of passive and active tone controls; and footswitchable reverb and chorus—chorus features Guild's acclaimed Stereo Enhancement Circuitry.

For more information on these and other quality Guild products, contact U.S. Music Corporation at 1-800-874-0415.

G-1000

- 90 watts R.M.S. total output (30w x 30w x 30w): Four 6" specially designed speakers driven by a 30-watt per side stereo amplifier; one 10" crossed over subwoofer driven by a dedicated 30-watt amplifier
- User selectable matching preamplifier for active or passive pickup systems
- Footswitchable chorus utilizing the Guild Stereo Enhancement Circuitry
- Footswitchable reverb
- Five-band active graphic equalizer (featuring +12db boost/cut capacity)
- Passive high-mid-low tone controls
- Isolated effects loop
- Separate level control for each input
- Low impedance microphone input
- Transformer-balanced XLR and an unbalanced 1/4" phone jack as direct outputs
- Comfortable seat cushion
- Fiber travel case and footswitch included
- Six removable casters
- Available in black ebony or mahogany, with Guild logo inlaid in mother-of-pearl

G-500

The acoustic/electric amplifier is also available in the smaller G-500 traditional combo model (not shown).
